

ABSTRACT OF THE DISCLOSURE

A ball catching tool comprises an outer leather member, an inner leather member and an elastic member. The outer leather member is formed by sewing a leather palm and a leather back to each other. The inner leather member, inserted into
5 the outer leather member, is formed by sewing a palm member located on the side of the leather palm and a back member located on the side of the leather back to each other and provided with a plurality of stalls including a thumb stall receiving the thumb of the user. The elastic member is fixed to the back member partially forming the thumb
10 stall to extend along the back member from one end of the thumb stall toward the other end of the thumb stall in the width direction of the thumb stall for fixing the thumb of the user in the thumb stall.
